Health Care Appointment? Bring Your Card!

1.
Grab your most current insurance card

2.
Show it before every appointment

3.
You receive the best price possible

It's important to show your insurance ID card before every appointment – whether it's for a primary doctor, urgent care, or ER visit – so you are billed correctly.

Showing your ID card ensures that you receive the best price possible and are not balance-billed (also known as surprise billing). It also makes your medical claims faster to process and reduces processing mistakes, which helps save your employer money, too.

If you have questions about your health benefits or insurance ID card, please call your Third-Party Administrator (TPA) – the number on the back of your card.
